Optical sorting for roasted coffee? Absolutely!

Assure your customers the highest quality beans using Satake’s new compact and cost-effective color sorter, the Satake PIKASEN FMS2000.

Case Study: The Curve Coffee Roasting Co.

The Curve Coffee Roasting Co. (Taiwan) installed the PIKASEN FMS2000 inside their cafe. Consumers in Taiwan are particularly aware of food safety. Sorting the coffee beans live, in front of the customers inside the cafe, helps create a favorable impression that their coffee is certain to be both safe and high in quality.
If you are interested in a free sort demonstration using your own beans, or if you need more information, contact one of our local test facilities.
